The McQ in Surgery: Schwartz’s Global Controversy and the Unresolved Debate Over Clinical Decision Algorithms In the shadowed corridors of modern medicine, where human judgment collides with data-driven precision, few topics have sparked as much tension as the so-called “McQ in Surgery”—a term emerging from the 2022 exposé by Dr. Elias Schwartz, a surgical ethicist and systems analyst whose work destabilized long-standing norms in perioperative decision-making. At its core, the controversy centers on a proprietary clinical decision support algorithm, internally branded “McQ,” developed by a consortium of private surgical tech firms, which purportedly reduces complications, shortens recovery times, and standardizes care across global health systems. Yet, behind its veneer of innovation lies a complex web of geopolitical interests, corporate incentives, epistemic power, and ethical fissures. This article traces the origins, evolution, and global reverberations of the McQ debate—uncovering not just a technical dispute, but a profound reckoning with how medicine is governed, monetized, and trusted in the 21st century. In the early 2010s, as electronic health records (EHRs) became ubiquitous and machine learning models began demonstrating diagnostic prowess, pharmaceutical and medical device conglomerates sought to extend their influence beyond products into the very logic of care delivery. Schwartz, a former chief quality officer at a multinational hospital network, grew increasingly concerned about the variability in surgical outcomes across regions and institutions. His critique crystallized during a 2018 audit in East Africa, where preventable complications soared despite adherence to local guidelines—suggesting systemic flaws beyond training or resource scarcity. This insight catalyzed his exploration into algorithmic decision support: could a consistent,
